
POSTING AN IMAGE

On screeprinters.net (Different forums have different guidelines)

In Plain English

■ First and foremost, **THE IMAGE NEEDS TO BE HOSTED BY A SERVER.**

Since there are several ways to accomplish this task, let's go through a few scenarios.

USING PHOTOBUCKET ...or any other online service

[1] Sign up for a (free) account.

[2] Upload your image to PHOTOBUCKET.

[3] **Copy** the image link provided by PHOTOBUCKET and simply **Paste** it into your post.

USING Your Own Website ...without knowing any html code.

[1] Upload your image to your website.

[2] Click on the image and **Copy** the http address that shows in your browser.

[3] When you get to the part in your post that you want to insert an image, first type **[img]**

[4] Then without using any spaces, **Paste** the http address you copied from Step #2.

[5] Lastly, again without spaces, type **[/img]**

THAT'S THE SHORT VERSION.

You can also post links to other websites, make parts of your post bold or underlined, post active links, etc. etc.

If this still sounds confusing or you're hitting a snag somewhere along the way, let's try **POSTING AN IMAGE** in more detail.

■ USING PHOTOBUCKET....or any other online service

[1] Sign into PHOTOBUCKET

Upload Images & Video

Use CTRL to select multiple files

Reduce to: 1024 x 768 (17" screen)

Use our faster [bulk uploader](#) or [old uploader](#)

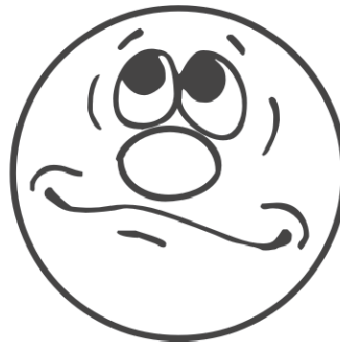

from:

- my computer
- web URL
- mobile phone
- email
- Ask toolbar

[2] Select the radio button from **MY COMPUTER**

[3] Choose Files

[4] Browse to find the **IMAGE** on your computer. Here's one:

[5] Upload your image to PHOTOBUCKET.

[6] PHOTOBUCKET will now list your image like this:

[click to add title](#)
[edit](#) | [move](#) | [share](#) | [delete](#)

UploadAnImage.jpg

[f](#) [e](#) [m](#) [more >](#)

Email & IM

Direct Link

HTML Code

IMG Code

[Link options](#)

[7] Put a checkmark in the image box.
and click on the link that says **IMG** code.

A yellow rectangle with the word **COPIED**
will briefly appear.

This link is now copied to the clipboard on
your PC.

THE HARD PART IS ALL DONE.

[8] Now it's simply a matter of typing your
post. Wherever you want that image to
appear, all you have to do is **PASTE**.

click to add title

edit | move | share | delete

UploadAnImage.jpg

    more >

Email & IM

Direct Link

HTML Code

IMG Copied

[Link options](#)

■ **USING Your Own Website** ...without knowing any html code.

If you already have a server that you use for your own
website, you don't need to use a service like **PHOTOBUCKET**.

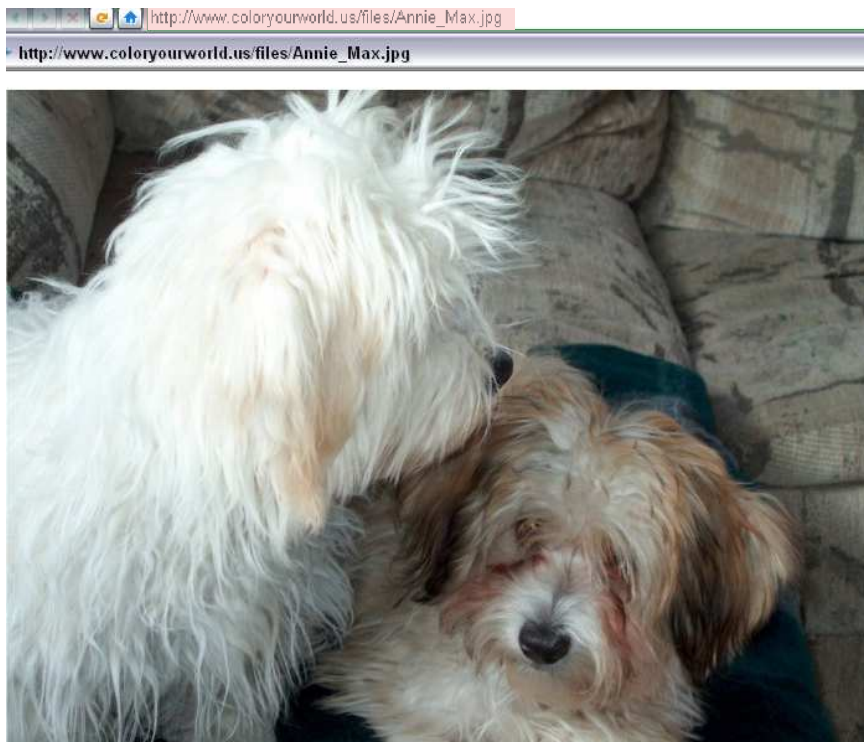

You can upload the image to your server.

This is how I do it, without any html knowledge.

Here's 2 of my Pups:

[1] I click on the image that I've upload to my site, highlight and copy the http address that appears in my browser.

[2] Now when I'm typing my post, I'll use the **IMG brackets that are listed in the **FAQ** section on the forum.**

While PHOTOBUCKET does this for you automatically, when you don't use the service, you need to manually add the tags.

[3] So..... when I get to the place in my post, that I want to add my Pups, I'll type **[img] then click **Paste** then add **[/img]****

It will look like this (NO SPACES)

`[img]http://www.coloryourworld.us/files/Annie_Max.jpg[/img]`

TIP: Don't Preview your post. It messes up the code.

If you make a goof, go back and use the Edit button.

Posting url's work the same way, except you use **[url] **[/url]** tags on either end, instead of **[img]** brackets.**

Hot links are slightly different.

....to be continued.
